Projects

Annapurna India | HTMS, CSS, Google Google Workspace, Github

January 2024

- Developed a Website that connects the source of food wastage to that of the person who is in need. By connecting NGO's to our cause.
- Created the website in such a way such that a NGO that registered with us their location is stored with us using google sheets and necessary documents are stored with us in google drive automatically.
- Created a web page such that the current location of the donor will be captured and shared to the website handler through mail.

School Database Management System | Python, Tkinter, Microsoft Excel

January 2022

- Created a Python Application to manage school database like details of students, marks, etc. The details of the teachers were also managed using this software.
- Used Tkinter to design the user interface and improved the user interface and speed of the program through real time user feedback.
- Utilized basic concepts of file handling through Python and stored and managed data through .csv format and helped it open through Microsoft Excel.
- Utilized the File handling in such a way to perform admin sign in, add new users, perform user sign in, etc.
- Utilized CAPTCHA generation and verification in this project to verify user sign in.

Billing Software | Python, Tkinter

February 2021

- Designed a attractive user interface for a billing software which enabled the user to create different bills and keep a copy of the invoices.
- Used Tkinter to design a responsive python application to
- Used Python Libraries to print screen and save the invoice in the .pdf format to store the invoices at a dedicated location.
